**THE LAST MALE**

Sudan was 45 years old. He was born in the wild in 1973 in Shamba, Southern Sudan. In 1975, he was captured and taken to Dvůr Králové Zoo in the Czech Republic. In December 2009, he was moved to Ol Pejeta Conservancy in a project dubbed “Last Chance to Survive”. He died on March 19th, 2018.

**STATE OF THE SPECIES**

**Criticall Endangered and possibly Extinct in the Wild.**

**LEFT IN THE WILD**

0

**UNDER OUR CONSTANT PROTECTION**

2

Still alive on the planet

**ROAD TO TWO**

1907 – This sub-species was discovered by scientists

1960 – The northern white rhinos subspecies was more abundant than the southern white rhino subspecies with 2,000 animals ranging in the wild

1970 – The numbers had reduced to 700 individuals

1981 – Less than 350 rhinos in existence

1984 – There were a mere 15 in Garamba National Park, intervention raised the numbers to 31 but an outbreak of civil war led to a further decline of the numbers

Since then, thanks to poaching and death, only 2 remain in the world.

**THREATS TO RHINO EVERYWHERE**

In 2009, the price of rhino horn was approximately $3,000 per kilogram now in some places it fetches up to $60,000.

In 2014 it is known that over 1,000 rhinos in Africa were killed for their horns for illegal export to the far east.

**WHITE RHINO FACTS**

Their horn is made of Keratin, the same stuff as our nails and hair!

They are the most social of all rhino species.

Adult white rhino males can weigh up to 5,000 pounds.

The sole threat to white rhinos is human greed! They have few predators in the wild given their size.

**DONATE IN MEMORY OF SUDAN**
